

# SUPPORTING SMARTER ANTENATAL CARE

frequent monitoring  
of vital signs &  
symptoms reduces  
stress

blood glucose and blood  
pressure data helps manage  
or detect gestational  
diabetes & hypertension in  
mums-to-be

patient self-management  
eases the pressure on  
clinics and GP surgeries

avoiding complications caused  
by hypertension during birth  
can reduce the costs of care by  
over 70% - NICE Diabetes in  
Pregnancy 2015

tailored thresholds are  
used to alert clinicians,  
ensuring focus can be on  
the patients who are most  
in need

accurate patient data  
instantly available to the  
healthcare provider

wirelessly connected Bluetooth  
devices for capturing data on  
the patient's own smartphone,  
including Blood Pressure Meter  
and Glucometer

The HomeCare app from Digital Health specialists, SmartMed, has been created specifically to ease the burden of gestational diabetes & hypertension during pregnancy.

By providing the patient with an easy-to-use smartphone app and a set of wirelessly connected devices, it makes it easier for her to monitor her condition, helping reduce stress, and the pressure on clinics, surgeries and hospitals.

Regular self-monitoring reduces stress all round and can help mitigate the risk of complications during pregnancy.

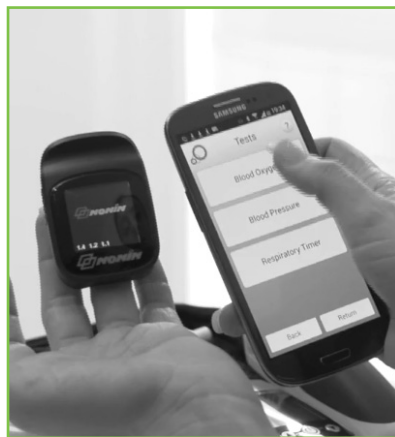

Regular readings bring reassurance.

Monitoring in a relaxed home environment.

NICE approved wellbeing questionnaires.

### Timely, accurate patient data

SmartMed's antenatal care monitoring tool delivers patient data to your desktop, enabling you to monitor your patient's condition throughout their pregnancy.

- Atypical results are immediately alerted.
- Messaging module enables you to remind patients to test, make appointments or take treatments.
- Rich data makes consultations more valuable.
